- Connecting cable
- Remote controller
- Lithium battery 12V -- 1800mAh
- Battery-charger 220V /
- Umbraco key

BATTERY CHARGE
Charge the battery to full before using the lift
- Connect the charger to the battery, use the second hole from the switch
- Connect the charger to the main power
- Turn the battery switch in position on

220V battery charger shows red lamp – Full charged battery, lamp turn green.
Battery will work for approx. 2,5 hours.

CONNECTION
- Connect battery and lift motor with the connecting cable. Use the hole closest to the switch of the battery.

STEP 1.
Get ready to use the lift.
Power on the lift and then long press the button on the remote controller more than 5 seconds. The lift indicator start flashing, and the lift start to move down. Release the remote control button and the lift will continue moving down to the final point. When the indicator light stop flashing ,gentle click the button on the remote control again , and the lift will move to start point A.

STEP 2
Moving from A to B and B to C

Gentle click the remote controller button and the lift start moving from A to B, or from B to C.

STEP 3
Direct moving from A to C or C to A.
Double click the remote controller button and the lift start move from A to C or C to A directly without stopping on B.

STEP 4
Remember function,
1) If the lift stops on point A, B or point C (one of the three) and the lift was powered off suddenly. If this happen, just put on the power again and use the lift as explained in Step 1 to step 3. You will not need to reset the lift.

2) If the lift stops none of point A, B or C, and the lift was powered off suddenly.
You will need to reset the lift. Power on the lift again and then follow instructions in Step 1.
